# huperRemote gViewer Quick Guide

huperRemote gViewer supports online video surveillance for Android mobile phones. Remote users can easily operate huperLab video surveillance systems, like video camera monitoring, and PTZ camera control as on the computer. The functions that huperRemote gViewer offers include single/4 split screen view switch, one touch snapshot, on-screen PTZ control, and full screen view.
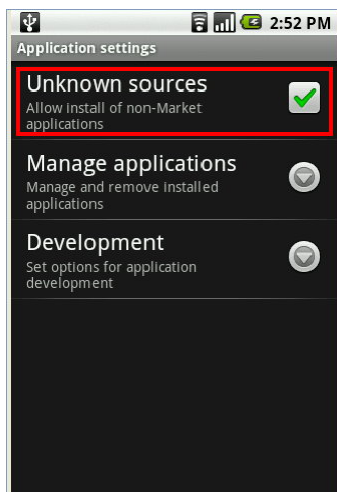

Installing huperRemote gViewer

Please follow the steps below to install huperRemote gViewer:

■   Enter the Settings of Android mobile device and select "Application."

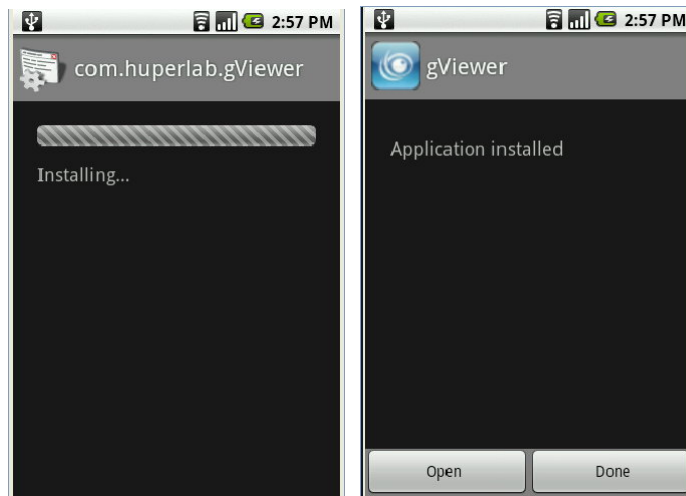

■   Check the option "Unknown sources."

■ Open the browser screen, and type the URL address http://211.23.2.67/gviewer.apk. Then touch GO to begin to download file.

■ When the file is downloaded completely, select "gviewer.apk," and then touch "Install" to continue.
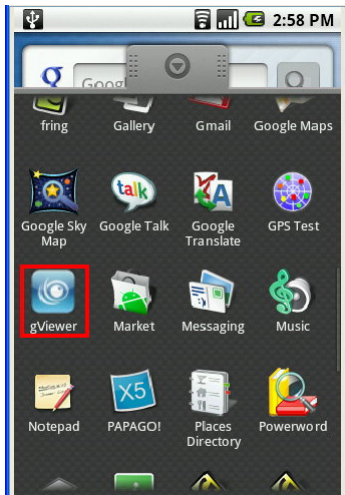

■ When the file is installed completely, touch "Open" to start huperRemote gViewer program or touch "Done" to end installation process.
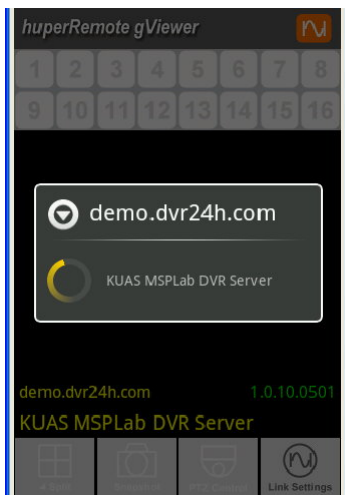

Starting huperRemote gViewer

Enter the main screen of your Android mobile device, and then touch to launch the gViewer program.

Touch the button on the main screen to connect demo remote site.

When you rotate Android mobile device, huperRemote gViewer will turn to be full screen display horizontally.
